

AUREL / HOME LIFTS

Elevate the way you live.

A considered guide to home mobility,
design and everyday life.

AN INTRODUCTION TO AUREL

A lift should feel part of home.

A home lift can make movement between levels feel more comfortable. But a good solution begins with more than a product choice. It begins with the home: its structure, light, circulation, materials and the people who use it every day.

THE HOME	THE PEOPLE	THE EXPERIENCE
Review the plan, structure, landings and available routes.	Understand who will use the lift and what would make daily movement easier.	Consider how the lift looks, sounds, operates and is cared for.

A useful first conversation

You do not need a finished plan to begin. Bring the questions you have, an early floor plan if you have one, and a sense of what you would like the home to make possible. A site assessment then helps establish what is practical and what requires further review.

Four directions. One personal fit.

AUREL model names represent design directions for this concept. The final product range, equipment and specification must be verified for each project.

AURA	Glass-led A clear, architectural presence for homes where light and sightlines matter.
NOVA	Space-led A thoughtful starting point for tighter plans and existing-home conversations.
LUMINA	View-led A panoramic expression designed to sit naturally within open volumes.
ELITE	Bespoke A more involved design brief for larger homes and individual requirements.

Materials make the difference

Glass, cabin finish, handrails, lighting, flooring, controls and doors all contribute to how a lift belongs in a home. Availability depends on the selected system and technical requirements. Samples and drawings help bring those choices into the wider interior palette.

A clearer brief starts here.

Use these prompts to guide an early conversation with your lift specialist, architect or project team.

- 01 What daily movement would you like to make easier?
- 02 Where could the lift sit without compromising the way rooms connect?
- 03 What structure, services or approvals need to be reviewed?
- 04 Which drive options suit the building and expected pattern of use?
- 05 What safety functions, backup arrangements and emergency procedures apply?
- 06 What maintenance, inspections and service response should be expected?
- 07 Which finishes and controls can be selected for the exact model?
- 08 What will the installation programme, site preparation and handover include?

A thoughtful way forward

Consultation → Site assessment → Project-specific proposal → Installation planning → Handover and care

IMPORTANT: This concept brochure is an introduction only. Product names, imagery and descriptions are illustrative placeholders. No capacities, dimensions, travel, stops, drive technology, safety functions, prices, service commitments or regulatory approvals are specified here. Obtain qualified, project-specific advice and confirm all information in the final written specification.
